Full-Stack Engineer | Superset World

Cover letter

Hi Superset team,

I run a small IT and software practice, so I know what it means to build a tool for people who are busy running their own business. I built our client operations platform around the actual work: requests come in, appointments get scheduled and invoices have to tie back to the right client. I still support the people using it. That's why Superset caught my attention. Giving a coach one place to program workouts and run the business is useful in a way another dashboard isn't.

I've loved making computers do useful things since I was a kid. It felt like magic then, and I still get that feeling when I take a chore off someone's plate.

For Velatis, I helped deliver a research product where AI assistance worked alongside deterministic chart tools. I liked working out which parts should be predictable and which parts actually benefited from a model, without losing sight of what the user could share or keep private. On NuPrice, I built and operated a repricing product that turned marketplace data and customer rules into actions. Supporting it after launch meant getting good at finding out why a particular decision happened, not just whether a job finished.

I'd bring that approach to Superset's AI programming workflows: make the draft easy to check, change and deliver, with the coach remaining in control of the final program. My strongest production stack is TypeScript, React and PostgreSQL, and I've worked hands-on with AWS and containers. I'd ramp into the Django and Expo parts of your stack rather than pretend those are where I've spent most of my time.

Thanks,
Chad Koslovsky
